

# Icing Forecast

- Current ice accumulation forecast due to freezing rain.
- Any amount of freezing rain can cause slippery roadways & sidewalks, resulting in difficult travel conditions.
- Amounts over 0.25" start to cause concerns about damage to tree limbs & power lines due to the weight of the ice. If vegetation is still carrying a snow load from yesterday's storm, problems will start even sooner.
- See the next slide for potential worst case scenario for a major ice storm.
